## Principal Equipment

|  |         |
|--|---------|
| Servo Press Amada 80t                              | 2units  |
| Link Press Amada 80t                               | 4units  |
| Link Press Amada 60t                               | 3units  |
| Press Amada 60t                                    | 3units  |
| Press Amada 45t                                    | 2units  |
| Press Amada 35t                                    | 3units  |
| Press Amada 25t                                    | 3units  |
| Press Amada 15t                                    | 6units  |
| Precision bench press JAM 3t                       | 5units  |
| Foot Press   | 28units |
| Forming machine Teijin Seiki                       | 3units  |
| Wire cutting electro-discharge arc machines Sodick | 3units  |
| Electro-discharge arc machine Sodick               | 2units  |
| CAD CE   | 2units  |
| Surface grinding machine                           | 1units  |
| Profile projectors                                 | 2units  |
| High speed centrifugal barrel finishing machine    | 1units  |
| Rotating barrel finishing machines                 | 4units  |
| Washing machine                                    | 1units  |

## Plant

### Offering top-quality professional products is fundamental.

We've dealt with in excess of 2,000 types of clips to date and have developed more than 300 varieties of "Tohkin Original Clips" in-house. Naturally, the 200 million-plus pen clips we produce annually are used domestically, but they're also used overseas, too. Our clips enjoy an established reputation worldwide, not just for their design but for their high quality, which accentuates the intrinsic "clipping" function.

150 of our pen clips are patented. It's not just about making the shape; we are continuously addressing ways to incorporate enhanced functionality into the manufacture of pen clips.

Plant Headquarters

Plant Chiba

## Plant Headquarters

### Mold design and manufacture Small lot production system

We implement all processes from product design that accentuates function, through mold design and production.

The production division within headquarters focuses on intricately designed clips and small lot premium clips, and each and every process is carefully executed.

## Tackling mass productionstem

The forward rotation molds and forming machinery used in production have enabled us to dovetail our operations for mass production, allowing us to effectuate the manufacture of high quality clips with a short lead-time and at low cost.
